Proceedings of Baltic HIRLAM Workshop, St.Petersburg, 17-20.11.2003

CONTENTS

Introduction 1-3

Programme of the workshop 4-6

List of participants 7

HIRLAM-6 Project, progress and status 2003, Per Undén 8-14

The finest scale HIRLAM - the Tartu model, Rein Rõõm 15-20

Current problems of stable boundary layer modelling, Sergei Zilitinkevich 21-22

Experimental very high resolution forecasting at EMHI, Aarne Männik and Ivar Ansper 23-24

On the parametrization of precipitation in warm clouds, Priit Tisler and Hannu Savijärvi 25-27

The effects of small-scale inhomogeneity in the surface layer, Kirill Yegorov 28-34

Sodankylä mast data for model comparison studies, Markku Kangas 35-38

One-dimensional model studies in stable boundary layer, Eric Bazile 39-42

Convection in hydrostatic and nonhydrostatic HIRLAM, Sami Niemelä and Carl Fortelius 43-47

Modelling a heavy rain case in North-East Estonia in August 2003 -preliminary results, Andres Luhamaa 48-49

MM5-model: First experiences and results, Erik Gregow and Jari Mustonen 50-51

Surface modelling in Northern Europe, Stefan Gollvik 52-60

Bridges between meteorological and dispersion models at different scales, Yevgeny Genihovich and Mihail Sofiev 61-65

Modeling of airflow over inhomogeneous vegetation at microscale, Andrey Sogachev and Oleg Panferov 66-70

Some methods to consider soil freezing effect in land surface block of atmospheric models, Katherina Kourzeneva and Dina Kozlova 71-74

Orography-related problems in HIRLAM, Laura Rontu 75-78

A study of radiation parametrizations for sloping surfaces, Anastasya Senkova and Laura Rontu 79-82

A two-layer lake model for use in numerical weather prediction, Dmitrii Mironov et al. 83-85

LIST CONTINUES on the back side ...

http://hirlam.knmi.nl
http://hirlam.fmi.fi/Baltic

Effects of boundary-layer thermal stratification and underlying surface roughness to the deposition of coarse solid particles, Marko Kaasik 86-89

Some lessons from the SILAM model application to the European Tracer Experiment, Mihail Sofiev and Pilvi Siljamo 90-93

Modelling of chemical transport and transportation of air pollutants: uncertainties connected to the meteorological input, Marke Hongisto 94-99

Long range transport of birch pollen. A problem statement and feasibility studies, Pilvi Siljamo et al. 100-103

MGO Regional Climate Model: present-day climate simulation, Igor Shkolnik et al. 104-107

MLAM, Three dimensional limited area model of the Martian atmosphere, Janne Kauhanen 108-111

Atmospheric Modelling Training in RSHU, Katherina Kourzeneva et al. 112-113

Numerical methods and modelling at the division of Atmospheric Sciences at Helsinki University, Sami Niemelä and Hannu Savijärvi 114-115

The planetary boundary layer parameterization for the for the climate modeling with emphasis to the high latitudes, Vladimir Romanov 116-119

Assessing the role of observational errors in data assimilation: experiments with a global data assimilation system, Mihail Tsyroulnikov et al. 120-123

Variable resolution model of Russian Hydrometeorological Research Centre, Mihail Tolstyh 124-128

Experiences from the pre-RCR runs at FMI, Simo Järvenoja 129-138
